## PHYSICIAN STATEMENT FOR POC USE

Dear Physician,

Physician's signature

Your patient desires to use a Portable Oxygen Concentrator on board a United aircraft for upcoming travel. Federal Aviation Regulations require that a physician verify the customer's medical need to use this device while traveling on a commercial aircraft. Accordingly, please answer the questions below. After you have completed and signed this form, please return to your patient as this form must be in his or her possession and available for inspection on the day of travel.

We appreciate your time and assistance with this process. United Airlines Medical Department

IO BE COMPLETED BY PHYSICIAN	
This letter is my verification that the use of supplementary oxygen while traveling and this required Oxygen Concentrator (POC). I further verify the following:	
<ul> <li>I verify that the passenger has the physical and cognitive and visual cautions and warnings and is able, without as cautions and warnings.</li> </ul>	re ability to see, hear, and understand the device's aural sistance, to take the appropriate action in response to those
• I verify that the passenger's use of the POC is medically	necessary.
the airline is not responsible for the POC's physical cond without extraordinary medical assistance and has been a	patient's responsibility and the airline is not responsible ding nasal cannulas or other POC-related equipment, and that lition. The patient is capable of completing the flight safely advised by me to have ample charged batteries to power the hours to cover any unexpected delays, gate holds, diversions
<ul> <li>Any change to the patient's health that would amend the Medical Verification Statement be completed.</li> </ul>	e criteria listed above will require that an updated Physician
Please check the appropriate statement below:	
POC is medically necessary during all phases of the fligh	t, including taxi and take-offs and landings.
POC is medically necessary only during the portion of the crew, which is generally after take off and before landing	
POC is medically necessary intermittently during flight, b	out not during taxi, take off or landing.
The oxygen flow rate setting for the POC is li cabin under normal operating conditions.	ters per minute (LPM), considering the air pressure in the
