ResMed **Air Solutions**

optimal comfort

a new beginning
in optimal comfort

[ResMed.com/AirSolutions](https://www.ResMed.com/AirSolutions)

ResMed Air Solutions offers heated humidification as a standard feature built into all ResMed AirSense™ 10 and AirCurve™ 10 therapy devices. Now every patient can experience the benefits of humidification—helping them adjust to treatment, and use therapy for longer.¹

An integrated solution

By combining the new HumidAir™ heated humidifier and therapy device, humidification can now be delivered in one easy-to-use system. With fewer parts to set up and manage, therapy becomes much simpler for you and your patients.

Humidification made easy

With Climate Control's enhanced Auto option, both temperature and humidity are pre-set at levels designed to deliver optimal comfort. So patients can now receive comfortable humidification by simply attaching the ClimateLineAir™ heated tube and pressing Start. There are no settings to change and no complicated menus to navigate.

Connected care

Every AirSense 10 and AirCurve 10 therapy device features built-in wireless technology, which seamlessly connects to ResMed's new cloud-based patient management system, AirView.™ So healthcare professionals, including physicians, can now rely on one integrated system to provide all the information needed to effectively manage patients. AirView also offers the capability to troubleshoot remotely, thanks to its remote assist feature, so common humidification questions can be resolved in minutes.
